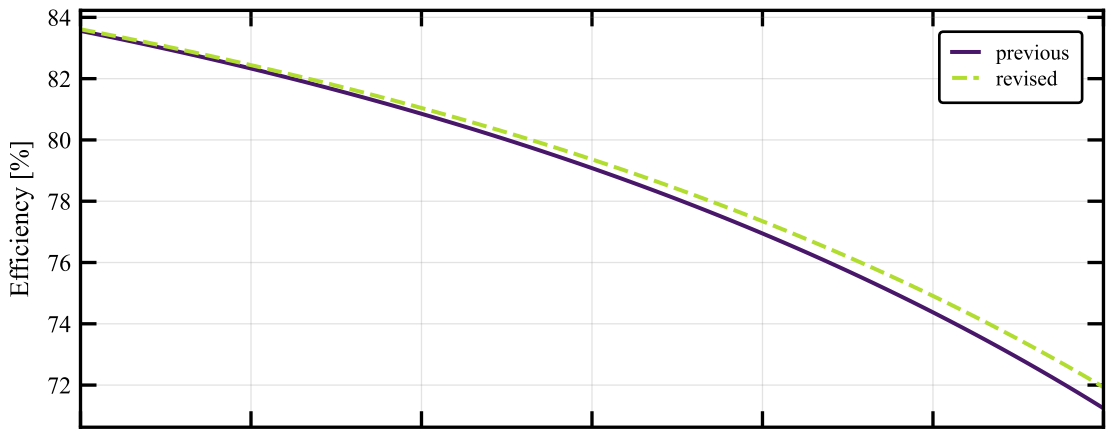
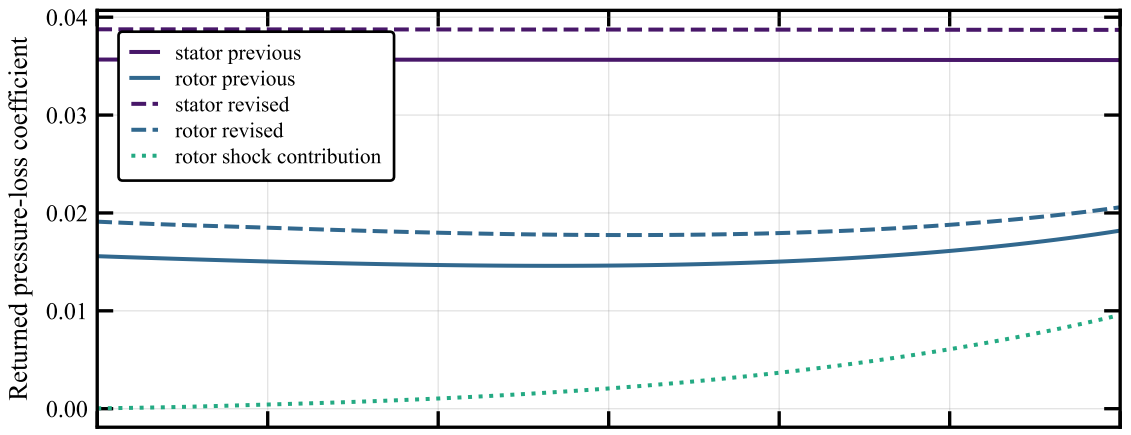
Recuperator effectiveness 0% | Reaction-sweep diagnosis
Full turbine API; solid previous, dashed revised; all axes linear

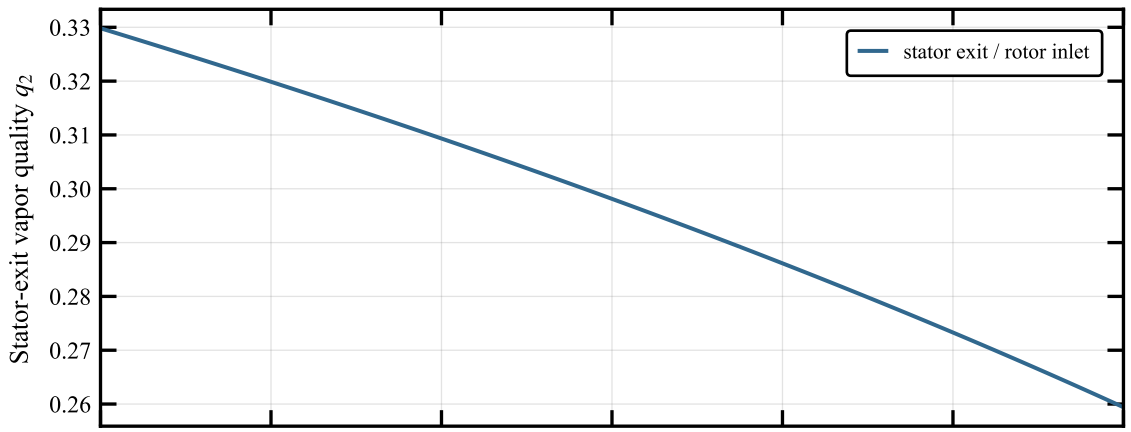
Total-static efficiency



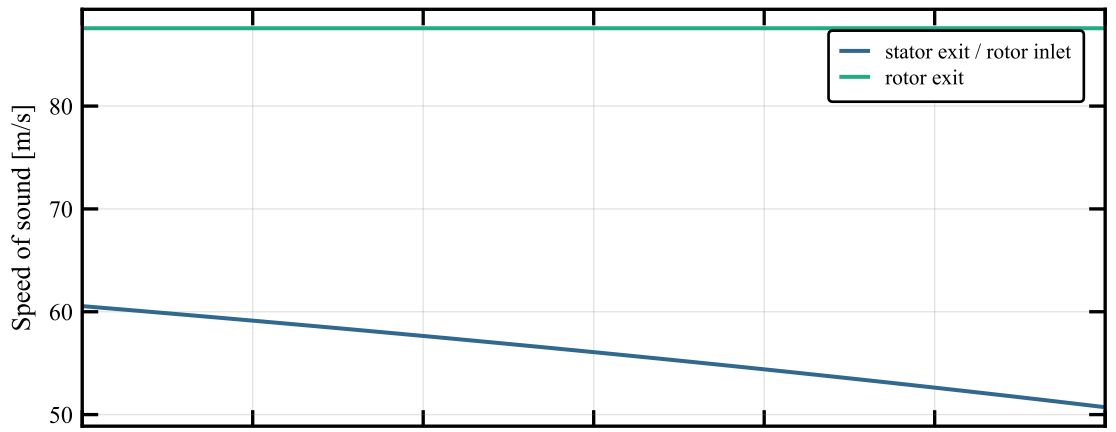
Profile loss and rotor shock contribution



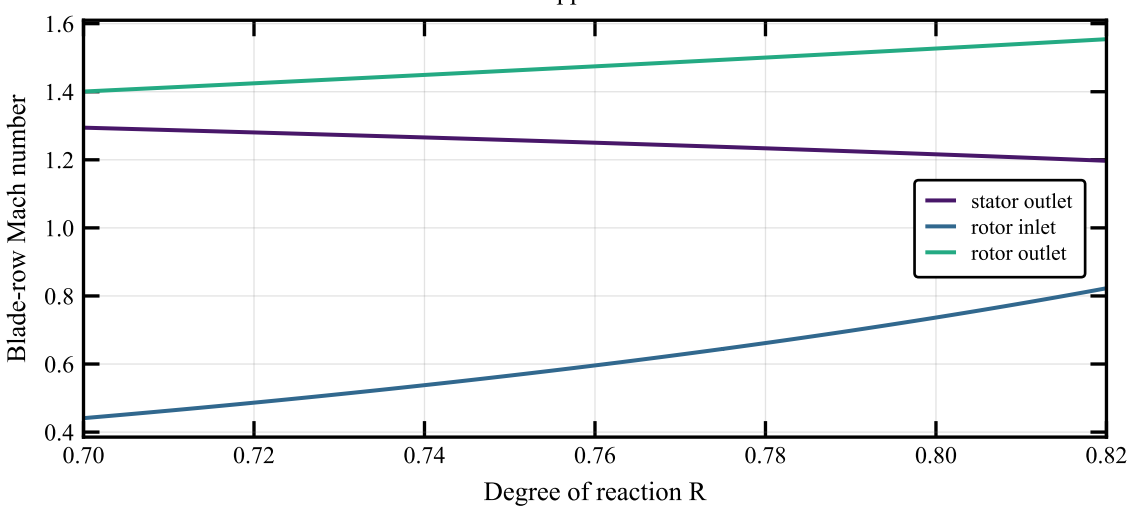
Vapor mass fraction



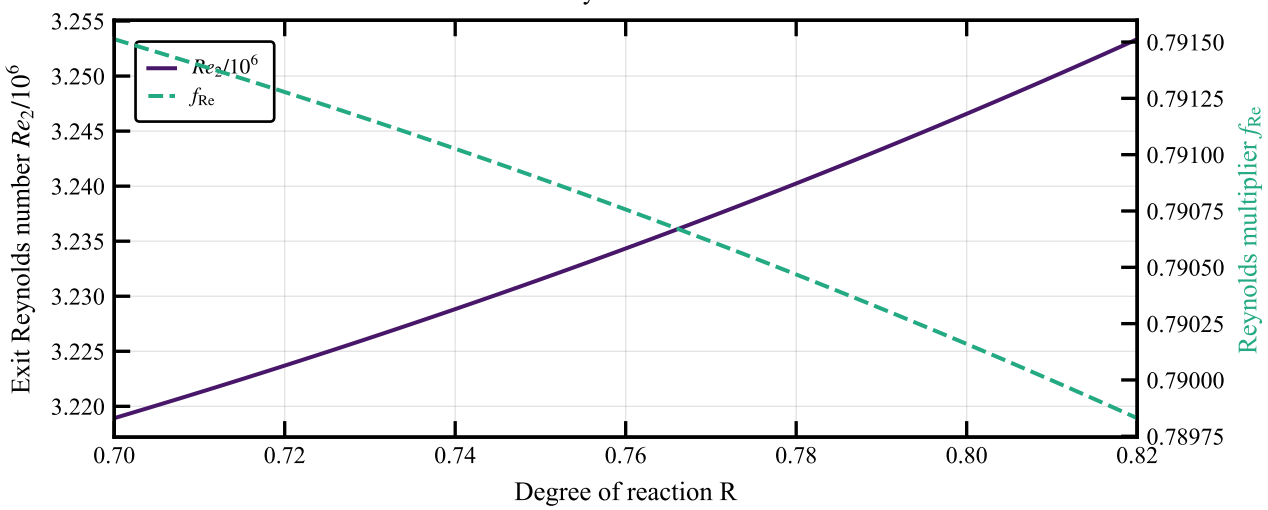
Acoustic model output



Mach numbers supplied to the correlations



Stator Reynolds correction



No acoustic-model switch occurs in this interval for the 0% case. Thermodynamic curves are common to both loss-model versions.
Pressure-to-energy coefficient convention retained; these are diagnostic model outputs.
