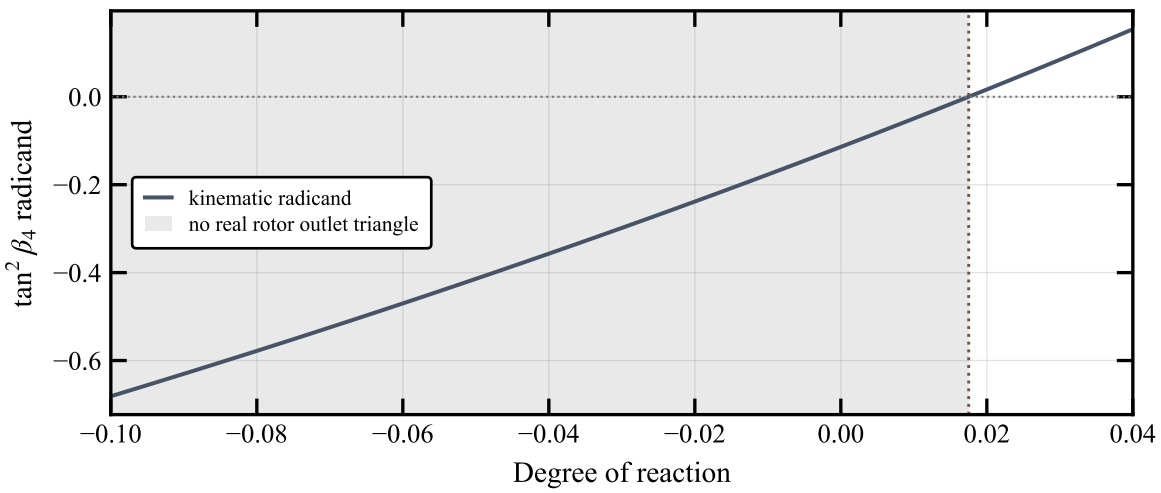
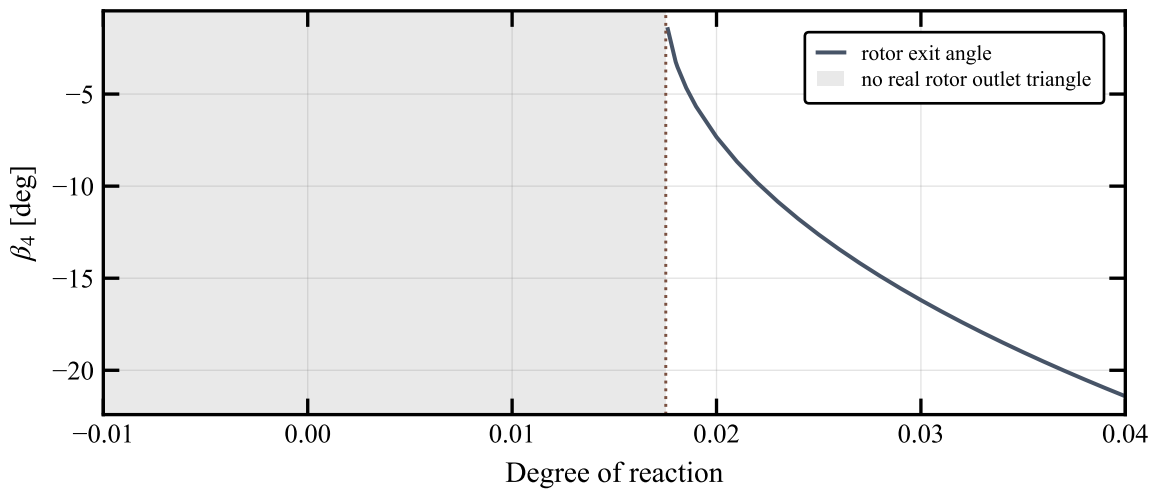
Recuperator effectiveness 80% | Near-zero reaction diagnosis
Real-triangle boundary at R = 0.01751779

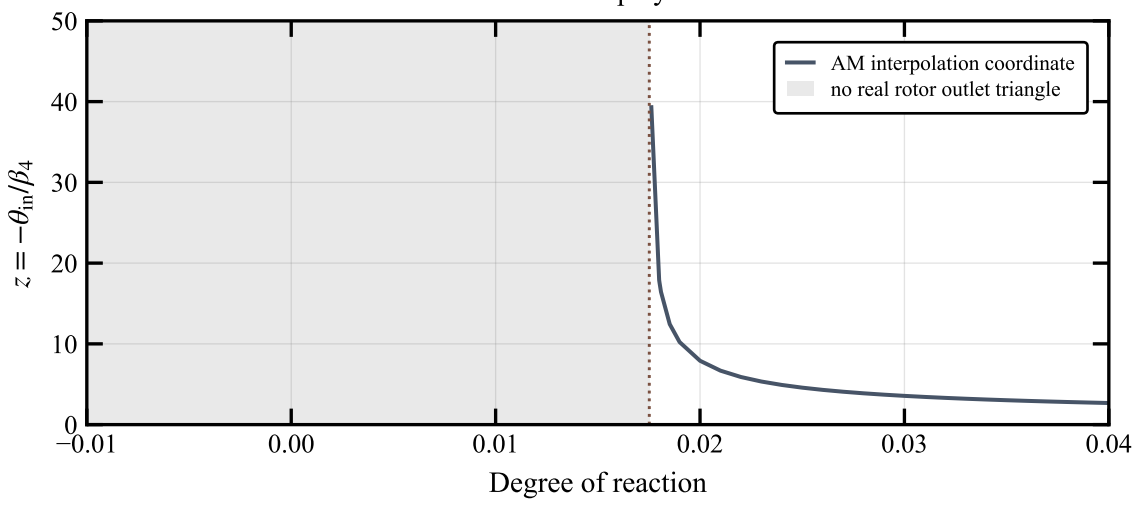
Real rotor triangle requires nonnegative radicand



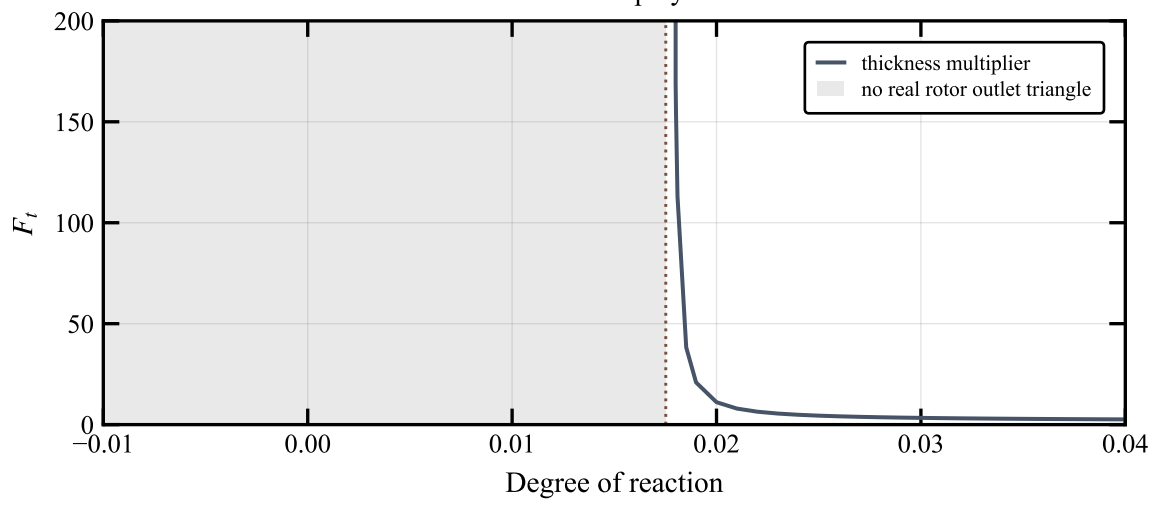
Rotor relative outlet angle approaches zero



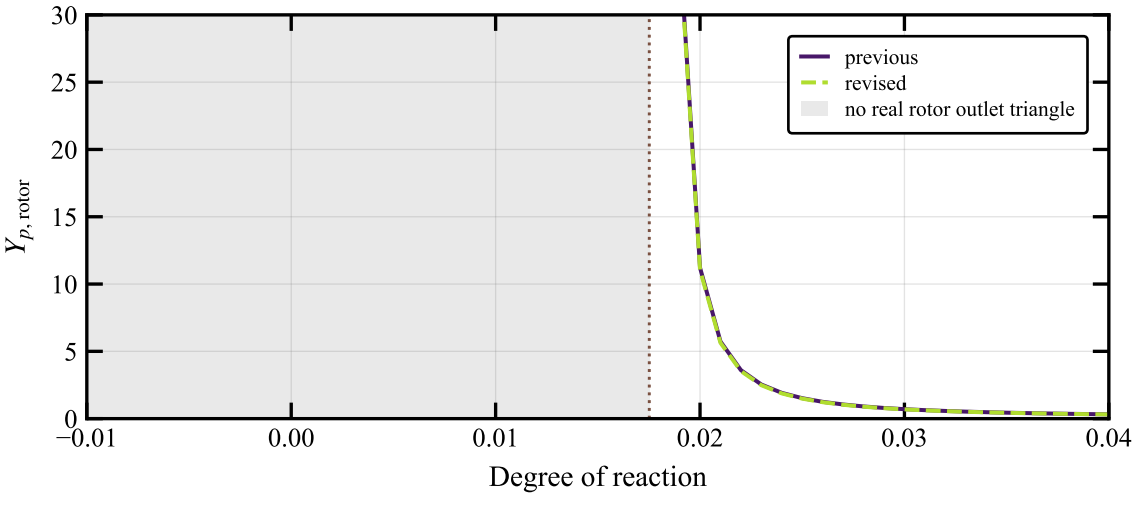
AM coordinate: display zoom 0–50



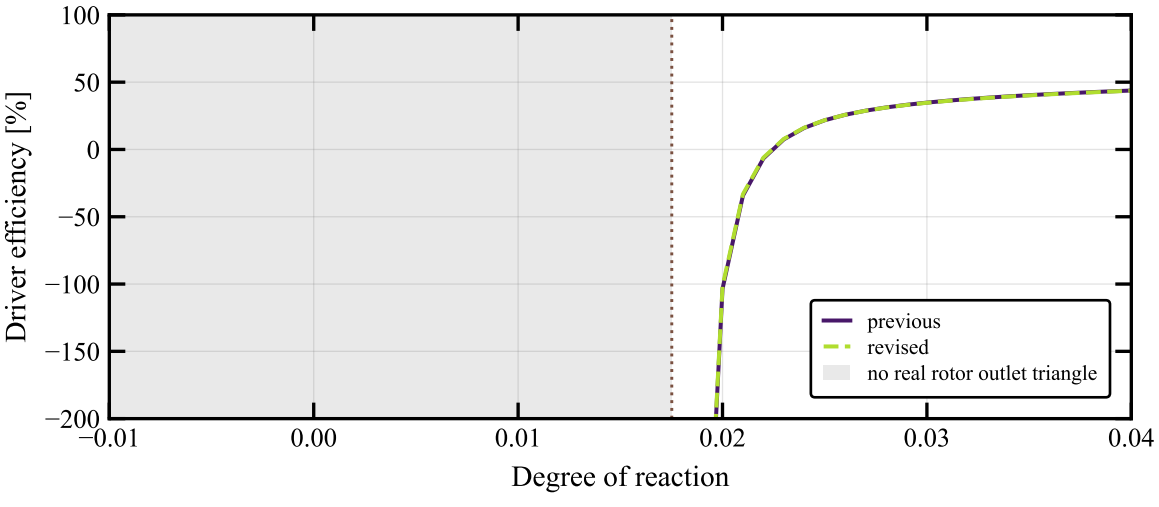
Thickness factor: display zoom 0–200



Weighted rotor profile: display zoom 0–30



Total-static efficiency: display zoom −200–100%



Linear axes throughout. Display limits are labelled; all extreme values and failed inputs remain in the CSV.
The full sweep is −0.1 to 0.04; five panels focus on −0.01 to 0.04. Both versions share the same kinematics.
