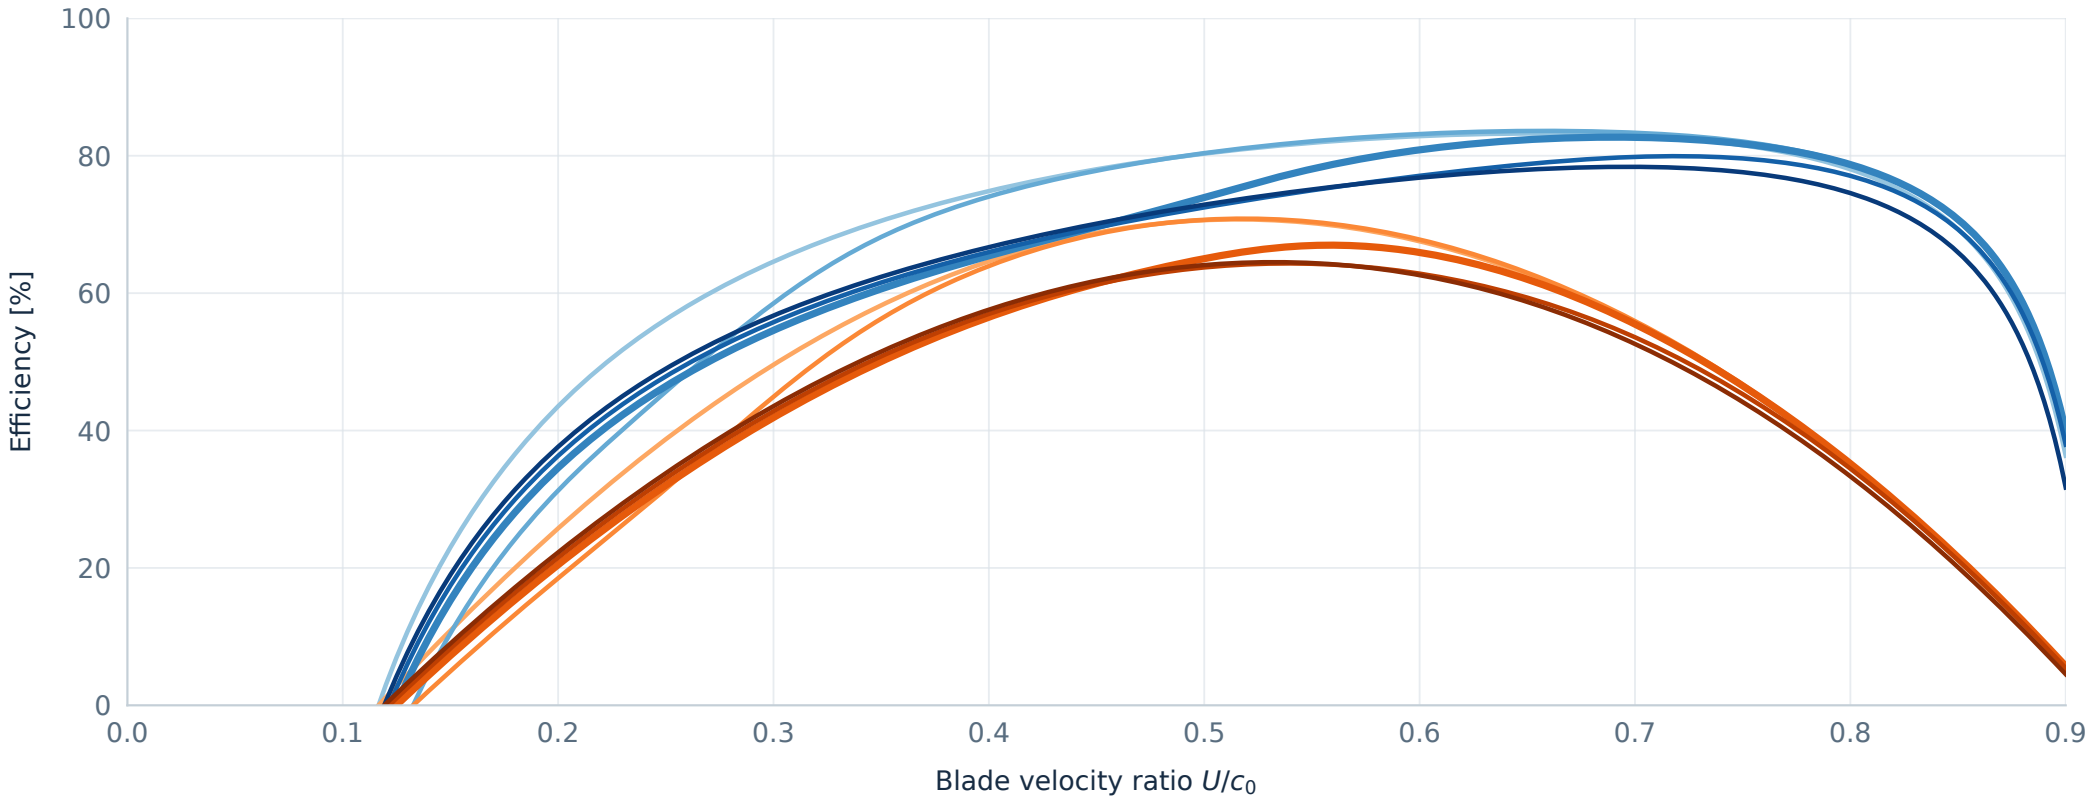
Efficiency through the zero-hub boundary

KO · $R = 0$ · $\alpha_2 = 70^\circ$ · shared coordinate (0.30 limit) · original efficiency definition



Signed hub radii and efficiencies are retained; efficiency axes show 0-100%.

Total–total η_{tt}

0.1 0.5 1.05 1.5 2

Total–static η_{ts}

0.1 0.5 1.05 1.5 2

Curve parameter: specific speed Ω_s · bold: 1.05 · both efficiencies use solid lines
