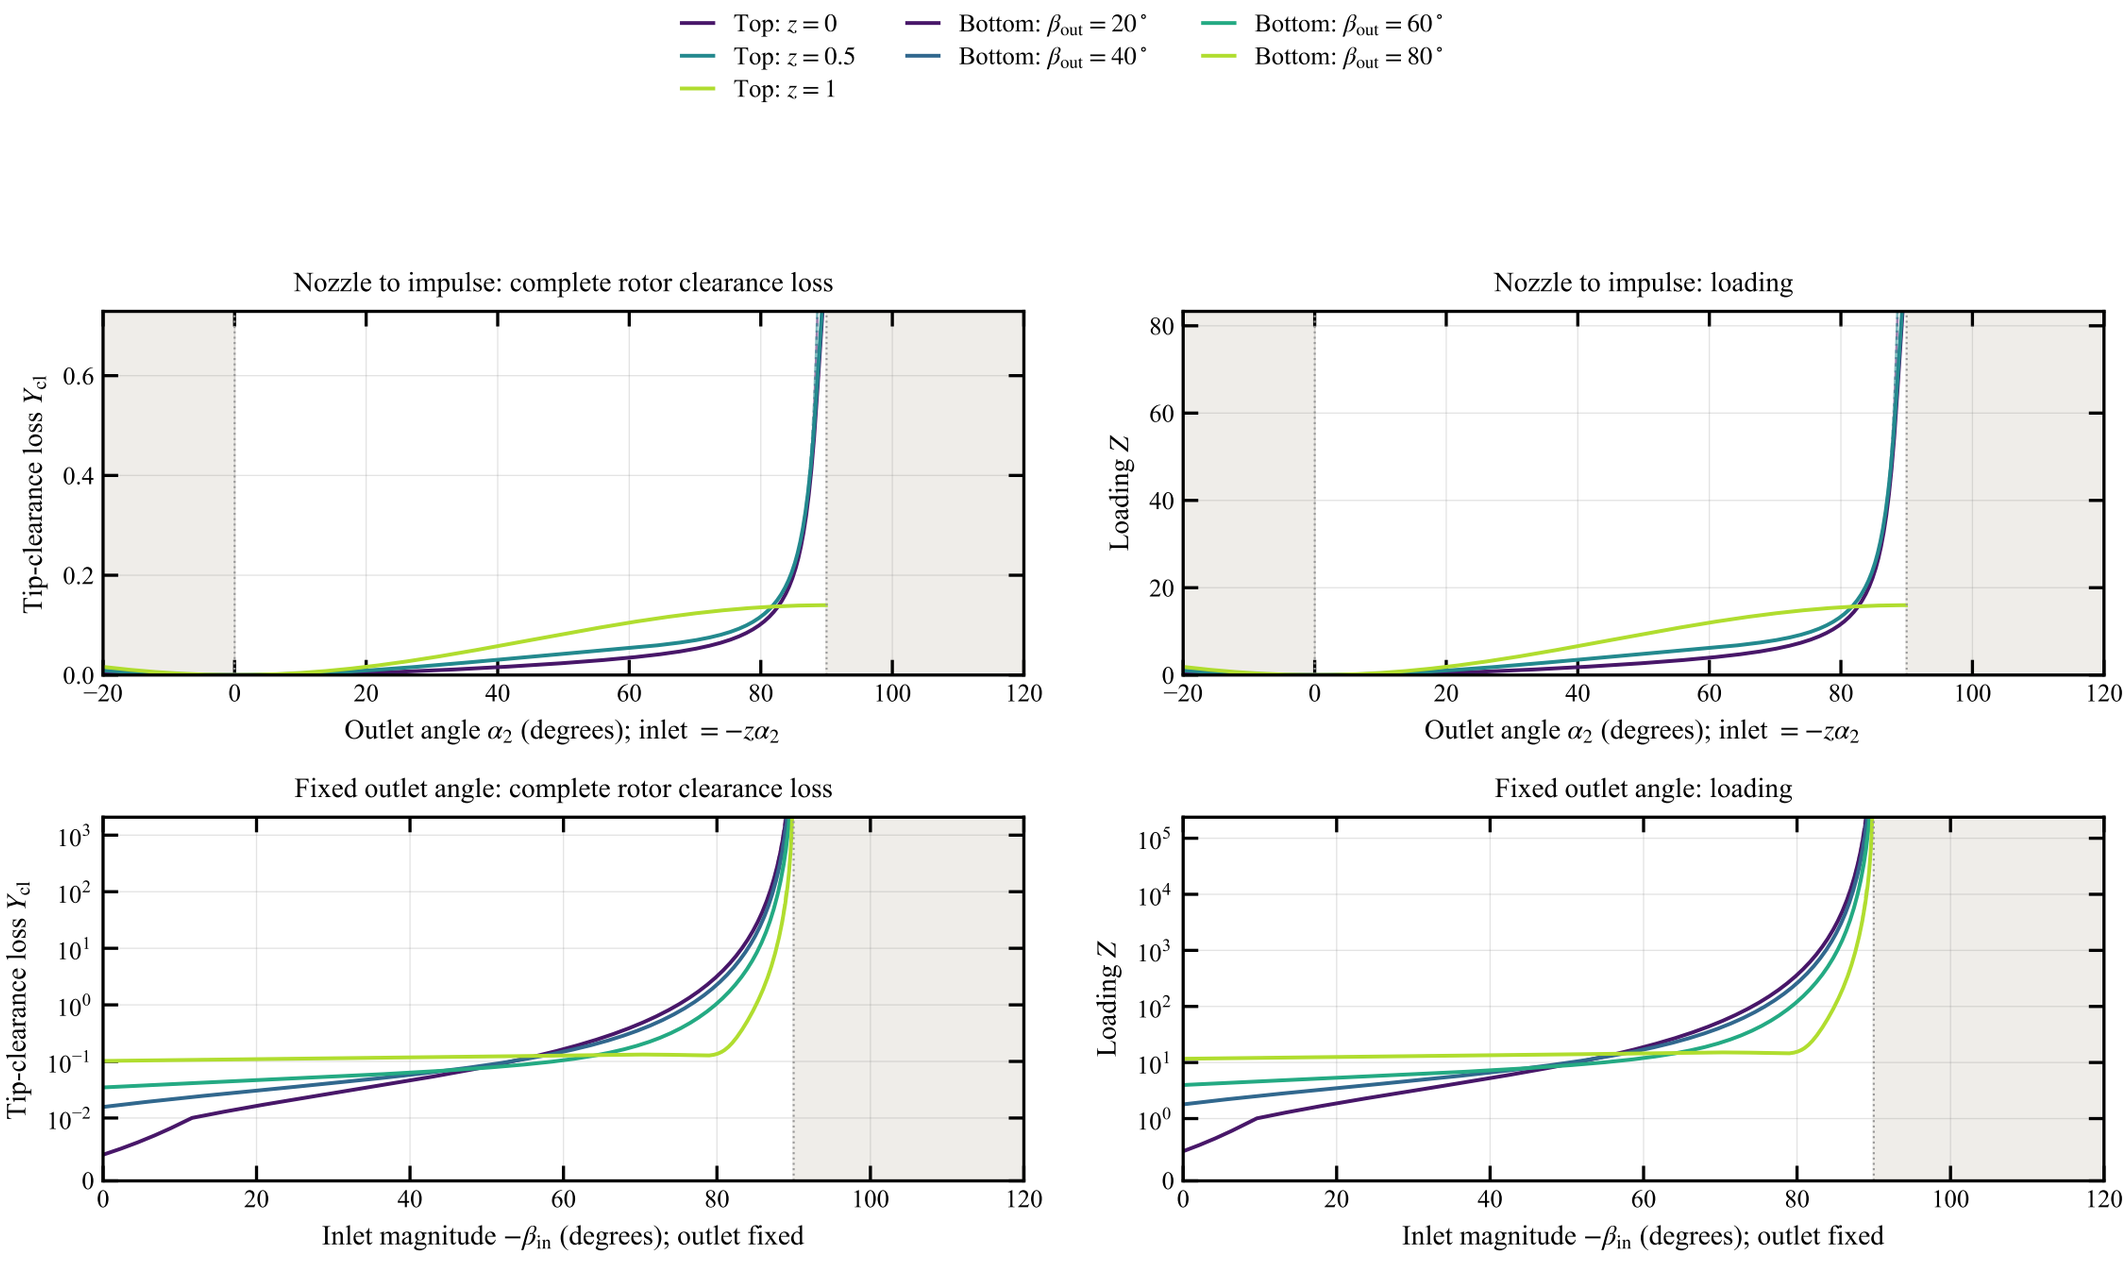
KO clearance: extreme-angle loss and loading without angle clipping



Left: complete rotor clearance coefficient. Right: loading Z. AR = 2; gap/height = 0.01; chord = 0.05 m.
Solid: production model. Dashed: original KO correlation (stops at 89 deg; may exceed panels).
Beige: negative outlet trials (top) and nonphysical angles at/above 90 deg, retained as NaN.
Physical turning; only the mean secant has an 80/87.5 deg continuation. No final loading cap.
