
M1 = 0.6; hub/tip = 0.5; angle = 60 deg; s/c = 0.7; z = 0.5; thickness/chord = 0.2; Re = 500000.
Same prescribed pressures as the Mach sweeps. Tint: M2 > 1; the rotor hub Mach also exceeds 1.2.
The shock continuation bounds its own term, not the complete profile coefficient.
